

# Challenges to Adoption

Despite the potential benefits, there are several challenges to the adoption of healthcare technology by senior citizens in India:

- **Digital Literacy:** Many seniors lack the digital literacy skills needed to use technology effectively.
- **Affordability:** The cost of technology can be a barrier for some seniors.
- **Connectivity:** Reliable internet access is not always available, especially in rural areas.
- **Privacy and Security:** Concerns about data privacy and security can deter some seniors from using technology.
- **Cultural Barriers:** Some seniors may be resistant to adopting new technologies due to cultural beliefs or lack of trust.
